**Symptoms:**  
Coronavirus disease (COVID-19) is an infectious disease caused by the SARS-CoV-2 virus.  
  
Most people infected with the virus will experience mild to moderate respiratory illness and recover without requiring medical treatment. However, some will become seriously ill and require medical attention. Older people and those with underlying medical conditions (like cardiovascular disease, diabetes, chronic respiratory disease, or cancer) are more likely to develop serious illness. Anyone can get sick with COVID-19 and become seriously ill or die at any age.  
  
The best way to prevent and slow down transmission is to be well informed about the disease and how the virus spreads. Protect yourself and others from infection by staying at least 1 metre apart from others, wearing a properly fitted mask, and washing your hands or using an alcohol-based rub frequently. Get vaccinated when it's your turn and follow local guidance.  
  
The virus can spread from an infected person's mouth or nose in small liquid particles when they cough, sneeze, speak, sing or breathe. These particles range from larger respiratory droplets to smaller aerosols. It is important to practice respiratory etiquette, for example by coughing into a flexed elbow, and to stay home and self-isolate until you recover if you feel unwell.  
  
**Prevention:**  
To prevent infection and to slow transmission of COVID-19, do the following:  
Get vaccinated when a vaccine is available to you.  
Stay at least 1 metre apart from others, even if they don't appear to be sick.  
Wash your hands in warm water and soap frequently or use sanitizer if not available or when in poorly ventilated settings.  
Wear a mask in crowded and poorly ventilated indoor settings or when in poorly ventilated settings.  
When open, well-ventilated spaces are closed, wear a cloth or fabric mask.  
Wash your hands frequently with soap and water or use hand sanitizer when you cannot wash your hands.  
Cover your mouth and nose when coughing or sneezing.  
If you feel unwell, stay home and self-isolate until you recover.  
  
**Signs and symptoms:**  
COVID-19 affects different people in different ways. Most infected people will develop mild to moderate illness and recover without hospitalization.  
  
Most common symptoms:  
Fever  
Cough  
Fatigue  
Loss of taste or smell.  
Less common symptoms:  
Sore throat  
Headache  
Joint and body aches  
Diarrhoea  
In some cases, loss or discoloration of fingers or toes  
not or ventilated space.
